

Anas Arbaoui

Senior AI / Web & Mobile Developer

AI · Web · Mobile · Full-Stack · 0-1 · Vibe-Code Fixer

arbaoui.me · anas@arbaoui.me · [github/anarbb](https://github.com/anarbb)

Senior AI / web & mobile developer with strong expertise across Next.js, React Native, FastAPI, Django, Vue and Angular – at home in Docker and on Linux, building from database schema to UI polish.

I build complex AI-augmented products with deep understanding of both server architecture and user experience, comfortable owning a feature from spec to deploy. Currently solo-building Juridata.ma and Maroclegal.ai – legal-tech for the Moroccan market – while finishing the cursus at 1337.

I use AI tools to accelerate research, development, code review, and debugging cycles, while keeping production quality and code clarity under control.

2026 – Now

Senior Web / App / AI Developer @ Juridata.ma & Maroclegal.ai

Solo-building two legal-tech products end-to-end. Juridata.ma – a unified interface with six legal AI agents for Moroccan legal practice (jurisprudence search, contract review, litigation strategy) on sovereign Moroccan infrastructure. Maroclegal.ai – AI-powered legal services for the Moroccan market. Full-stack across web and mobile: Next.js, React Native, FastAPI, pgvector, Claude / OpenAI SDKs.

2024 – 2026

Senior Software Developer @ Openschool.ma

Built and maintained Openschool's education platform across the full stack – NestJS, React, Next.js. Shipped features for teachers and students, integrated AI-augmented workflows for content and assessment, and modernized legacy code that needed a person who actually reads it.

2024

Freelance AI & Web Developer

Bridge contracts between roles. Delivered AI-powered web tools and backend services for clients in Morocco and the EU – RAG pipelines, document analysis, custom chat interfaces. Worked solo from spec to production using FastAPI, Next.js, pgvector, and the Claude / OpenAI SDKs.

2022 – 2024

Co-founder & Software Engineer @ Enas Digital

Co-founded a digital agency focused on the automotive industry. Led development across NestJS, Flask, FastAPI, Django, React, and Next.js. Owned client relationships and shipped custom dashboards, websites, and internal tools end-to-end while managing a small team and steering technical direction.

2021 – 2022

Freelance Web Developer

After my bachelor's at Université Abdelmalek Essaâdi, took on freelance work while preparing for 1337. Built responsive websites, e-commerce stores, and small PHP-based tools for clients across Tangier and Tétouan. Where the full-stack instincts I rely on today were first sharpened.

2022 – Now

Computer Science Student @ 1337 / 42 Network

Completing the 1337 cursus (42 Network) in parallel with full-time work. Peer-learning environment focused on C, systems programming, algorithms, and project-based fundamentals that complement my self-taught web background.
